NOTES:

Action Corporation supports and embraces the use of virtualized and fenced environments.

After Action Corporation certifies a product on the high level version of an operating system, we assume that subsequent minor point releases of the operating system will also run successfully in the environment, as long as they contain no significant architectural changes.

Only the latest GA release of a product will be re-certified to run on a new major release of an operating system.

Products are supported on other platforms, such as Data General Intel, HP8, NCR, Sequent, SGI, Siemens and Sun OS, on a special services basis.

As with all upgrades, Actian recommends thorough testing before going into production so that any issues found can be resolved before going live.
