

Ingres Products

INGRES HAS THE LEADING OPEN SOURCE DATABASE PRODUCT LINE, WHICH IS IDEALLY SUITED FOR ENTERPRISES SEEKING OPEN SOURCE DATABASE AND DEVELOPMENT SOLUTIONS.

Ingres Database Key Benefits

- > Role separation for regulatory compliance and full audit capabilities
- > Robust XA transaction support
- > Hot Online automated backup, parallel restore, and in-place upgrades
- > Scalable architecture
- > Extensive Platform Support

Ingres Database - The Enterprise-Class Open Source Database

Ingres Database is the leading enterprise open source database. It combines the features of an enterprise-class database combined with the flexibility and user-driven innovation of open source.

A commercially supported, open source database management system (DBMS) that reduces IT costs and time to value, Ingres Database provides exceptional performance, availability, scalability, security, and extensive manageability features.

Ingres provides leadership in supporting mission-critical applications and helping manage the most demanding enterprise applications of Fortune 500 companies. As an open source database, Ingres Database has the advantages of collaborative development, rapid innovation, and lower cost.

Ingres continues to drive both technological and business innovation, providing the enterprise features you need with the open source model you want.

Ingres Icebreaker - The Appliance for Fast Business Solutions

Ingres Icebreaker revolutionizes how customers acquire and use enterprise open source business solutions. It is the first fully integrated enterprise-class database and Linux operating system with an intelligent online patching mechanism. Additionally, administrative tasks are simplified with an easy-to-use consolidated management portal.

Ingres Icebreaker Appliance presents a lower total cost alternative to database-powered applications. It's an ideal database platform for new users of Ingres technology due to its simplified setup, configuration, and management. Ingres Icebreaker Appliance leverages open source technology and simplifies administrative tasks, making it the lowest-cost alternative for enterprise open source solutions.

Ingres Icebreaker BI Appliance

To simplify business intelligence (BI) for the enterprise, Ingres has partnered with leaders of the BI industry to build Ingres Icebreaker BI Appliance, a complete BI solution based on Ingres Icebreaker. Ingres Icebreaker BI Appliance comes with a full featured BI suite that includes data integration, analytics (online

PRODUCTS

analytical processing, or OLAP), report design and delivery, and a data warehouse. The integrated package enables organizations to lower the total cost of ownership of BI while reducing the complexity of installation, configuration, and maintenance.

Ingres OpenROAD - The Tool for Rapid Application Development

Ingres OpenROAD is a rapid application development and flexible deployment solution. With Ingres OpenROAD, developers can quickly build and deploy sophisticated high performance and high availability business applications on a variety of platforms, accessing a broad range of data sources. As a result, you can react to business changes faster and protect your investment in existing mainframe and client server data and applications.

Enterprise Database Connectivity - Data Access to All Sources in the Enterprise

Most businesses have multiple database platforms. To allow simplified access to all your data, Ingres offers connectivity options to other relational databases as well as legacy mainframe systems. Ingres Enterprise Access allows users and applications to access data in any database as though it were in a single repository – whether the data resides in Oracle, Sybase, SQL Server, or another database.

Companies also have many legacy mainframe databases – and want seamless access from CICS, for example, to Linux. This access to all information reduces IT costs and improves productivity. Ingres EDBC, our mainframe enterprise database connectivity solution, can bridge information that would otherwise be captive in your mainframe systems with other data sources in your environment.

Ingres CAFÉ - The Tool for Easy Java Development

An Ingres Community Project

Ingres Consolidated Application Foundation for Eclipse (CAFÉ) is an award winning Java application development tool that accelerates and simplifies development with Java. Ingres CAFÉ is an open source community-contributed project that eliminates the time-consuming tasks of acquiring, installing, and configuring the many components developers need in a Java application development environment. Ingres CAFÉ delivers a “one click and code” solution for Java development, bringing together leading open source products. Given that they are built on the Eclipse open source integrated development environment and Ingres Database, the applications can scale from the desktop to the data center without modification.

About Ingres Corporation

Ingres Corporation is a leading provider of open source database management software and support services. Ingres powers customer success with the flexibility, cost savings, and innovation that are hallmarks of an open source deployment. Ingres supports its customers with a vibrant community and world class support, globally. Based in Redwood City, California, Ingres has major development, sales, and support centers throughout the world, and more than 10,000 customers in the United States and internationally. For more information, visit www.ingres.com.
